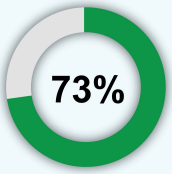
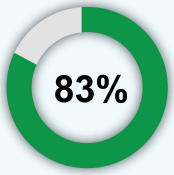
AVSI People for development

Host		Refugee	
3,304	16,576	3,325	17,747
Households	Participants	Households	Participants

Graduation

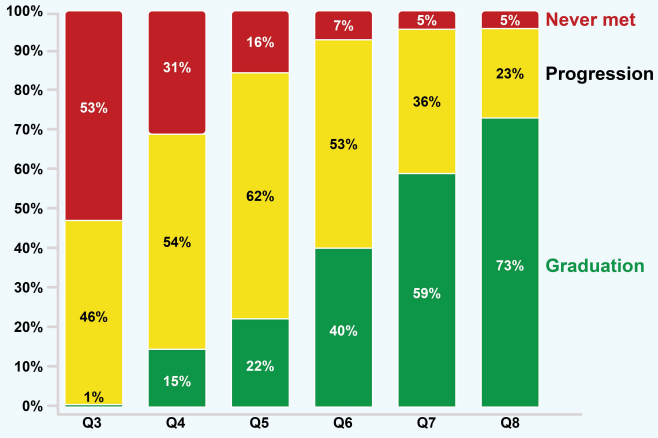


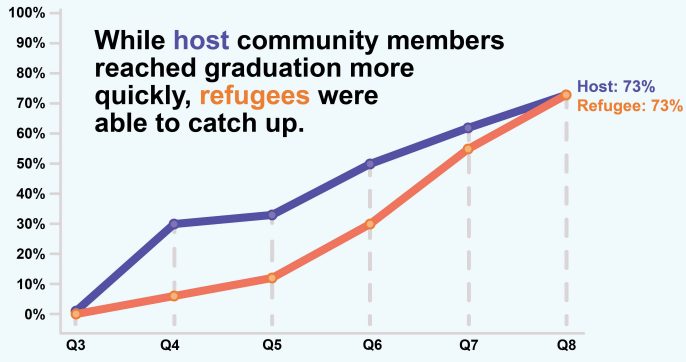
Households met graduation criteria for three consecutive quarters



Households met graduation criteria at least once

Just 5% of households failed to meet the graduation criteria in any quarter

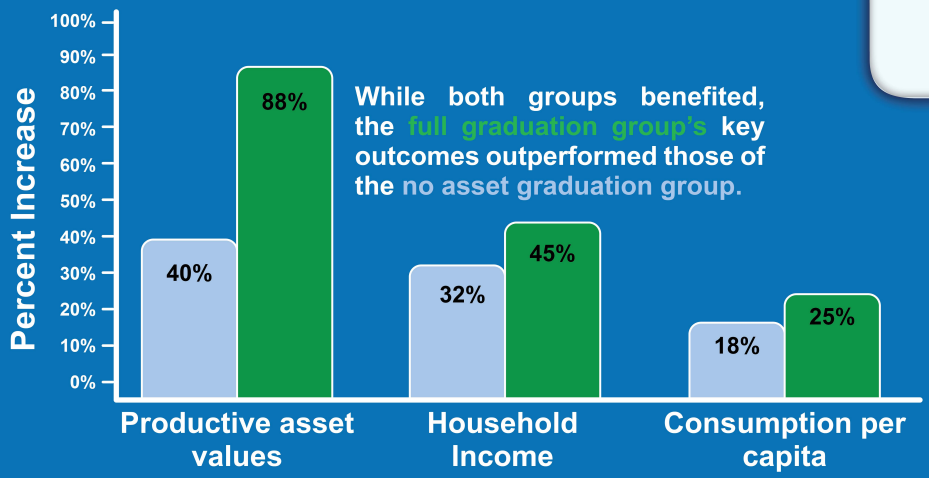




Results from the Randomized Control Trial

Innovations for Poverty Action (IPA) conducted an RCT with 10,514 households to test the performance and cost-effectiveness of three variations of the graduation model.

6,267	2,172	2,070	42	72
Treatment Households	Pure Control Households	Spillover Control Households	Refugee Villages	Host Villages



While both groups benefited, the full graduation group's key outcomes outperformed those of the no asset graduation group.

Food security increased among all treatment groups.

Well-being increased among all treatment groups.

The individual and group coaching models had similar impacts, but the group coaching model cost 13% less.
